

Riccardo Paltrinieri

Backend Developer

EXPERIENCE

bunq

Backend Developer

January 2021 - Present - 2.5 years

Actively contributed to the development of every kind of feature, playing a key role in the entire product lifecycle collaborating closely with cross-functional teams. I specialized in onboarding processes, leveraging my expertise to optimize and enhance the user experience

PROJECTS

Onfido and IDnow API integration

Integrated multiple Identity Verification providers' APIs, including Onfido and Incode for Dutch users and IDnow for German, French, and Spanish users.

The integration improved onboarding and internal processes while adhering to strict regulatory and KYC requirements.

Onboarding processes automation

By automating various KYC and KYB processes, including information and document requests, as well as user onboarding and offboarding based on responses, we achieved accelerated business growth, enhanced operational efficiency, and increased customer satisfaction.

International regulatory reporting

During the expansion of operations to various European countries, I was responsible for managing the reporting of newly created accounts and transactions that exceeded specific limits to the regulatory systems of each country. This involved complying with the requirements of regulatory bodies such as FIU, FICOBA, and SEPBLAC.

Miscellaneous

Additionally, I contributed to the development and implementation of several other features like:

1. New [budget management](#)
2. New [subscription with interest rate](#)
3. New [minors account](#)
4. Billing and invoicing optimization
